First Time in World.

DATA Lost

Data loss is one of Information Technology industry's most misunderstood concepts. Very little information has been made public about data loss, and the information that does exist is inconsistent. Due to the mixed messages they receive, users find it difficult to properly

evaluate their data loss situations and make educated decisions to recover from them. Most lost data is not lost at all; it has simply become inaccessible to the user. Hundreds of thousands of gigabytes (GB) of data have been lost simply because users were not aware of their options and gave up hope of recovery. Data is not really lost when it can not be seen. Don't panic! there are a variety of resources at your disposal for getting your data back!

Do not write any data into the hard disk or partition where data loss happened.

If the hard disk is physically healthy, data recovery software will save our precious time without privacy leak. If the hard disk is broken, just send it to the data recovery service center, they can help us.

If software recovery is unsuccessful, consider sending your device to a professional data recovery company. These companies have labs with experienced technicians using specialized equipment to recover data off of any digital storage device.

Always backup our important data for use.

Data loss is one of Information Technology industry's most misunderstood concepts. Very little information has been made public about data loss, and the information that does exist is inconsistent. Due to the mixed messages they receive, users find it difficult to properly evaluate their data loss situations and make educated decisions to recover from them. Most lost data is not lost at all; it has simply become inaccessible to the user. Hundreds of thousands of gigabytes (GB) of data have been lost simply because users were not aware of their options and gave up hope of recovery.

Data is not really lost when it can not be seen. Don't panic! there are a variety of resources at your disposal for getting your

data back!

Do not write any data into the hard disk or partition where data loss happened.

If the hard disk is physically healthy, data recovery software will save our precious time without privacy leak. If the hard disk is broken, just send it to the data recovery service center, they can help us.

If software recovery is unsuccessful, consider sending your device to a professional data recovery company. These companies have labs with experienced technicians using specialized equipment to recover data off of any digital storage device.

Will Help you to recover your lost data...

How to Deal with Data Lost

Is your hard drive clicking? Do you think you might have potentially lost data? If so, you might be in need of data recovery. Follow these quick and easy steps to ensure your hard drive can be recovered.

1. **Turn off the power to your computer.** Whether you have deleted files or your drive is making strange noises, you will have a much

better chance of a successful recovery if you turn off your computer and get help immediately.

2. **Do not run any software utilities on your computer.** Many of these tools will change the structure of the data on your disk and possibly cause more damage.

3. **If it is an emergency situation, call [janitor data](http://www.janitordata.com),**

a recovery company immediately so they can find the best solution for your problem as fast as possible.

4. When you ship your hard drive, wrap your hard drive in an anti-static bag, pack it in a box twice the size of the media and fill it with packing material such **Styrofoam peanuts or bubble wrap.**

Special points of interest:

- > ISO 9001-2008 Certified company.
- > Consistent Result.
- > Fastest Turnaround Time.
- > Technically Proficient.
- > Partners Network Across the country.
- > Client Satisfaction is our motto.
- > Scalability—data volume is not an issue.

Warning

Data Recovery Software is only useful for recovering recently Deleted Partition or Files. If a device is malfunctioning due to physical damage or internal malfunctions, recovery software will not work.

In case of any malfunctioning storage device, beware of the risks associated with trying to recover data yourself, you are likely do to more harm than good if the exact problem has not been determined.

Do you know when you buy laptop and desktop NO Manufacturer or Service provider give you data related service.— it is all service MINUS DATA i.e. Services or support only for PLASTIC AND METAL JUNK

Myth#1—One Machine and Regularly taking backup on External Hard disk.

Now User has one Laptop/ Desktop Machine...plus External USB 500 GB hard disk to store the Backup.

Now User has stored his/her all photo, documents and email on laptop and External Hard disk.

#1—Virus Infected –on laptop and External HDD Daily backup, means Infected file backup is taken and Now NO MORE CHANGES and Revert back—in case data lost.

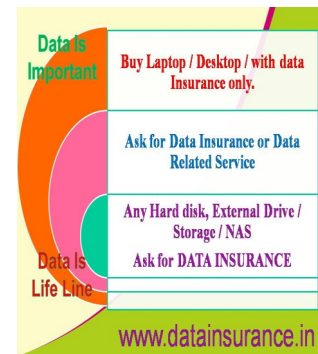

#2—Data is in laptop / Backup is on External HDD, assuming backup is perfect data is removed from the laptop like old photos, emails etc. Now one fine day external hard disk doesn't work.—Now what ? Get the data recovery done.

In short,

Data is needs to copy on multiple hdd or even the Data where it is copied is also a hard disk and it can also STOP working. Now what to do ?

Ultimately user requires the data recovery service.

This may happen sooner or later but can't be avoided. Best Suggested method is to have the Data Recovery Service plan—i.e. Data Insurance on regular or year to year basis.

Myth#2—Regularly Taking Backup.

User/Company Take a regular backup on daily basis either on one or multiple media. But never verifies on other machine that whatever backup taken is correct or required backup is complete. E.g. When you receive/pay cash to any body both the party check the amount, count the notes and verification of the

notes is done. But in case of data backup normally it is not done. And when actually checked it is found that required data is not backup and now they are in critical condition.

Ultimately user requires the data recovery service.

This may happen sooner or later

but can't be avoided. Best Suggested method is to have the Data Recovery Service plan—i.e. Data Insurance on regular or year to year basis.

External Hard disk

Myth#3- Service Engineer Upgrade the System

Generally all machine service and support is look after by third party agency called AMC vendor or Service provider. Engineer come to solve the problem.

As per the terms and contract DATA RECOVERY or Data related is not address by service provider.

But while upgrading Client/

User/Company say—TAKE ALL BACKUP in "D" Drive and FORMAT "C" and RE-LOAD—i.e. on the SAME machine, and Owner of data never verified prior to formatting—what data and other things are copied.

Now Engineer say Sir ALL backup is taken should I proceed...and Owner or BOSS say Yes...after confirming everything is OK. And

Engineer proceeds with the work and after loading everything owner / boss check and SCREAMS my so and so is missing...or "D" drive is also formatted.... In such scenario user / Owner / Service provider can't avoid in life.

Ultimately user requires the data recovery service.

What/Why Data Insurance

Data Insurance is designed to give the data recovery service at affordable cost. Data insurance offers a protection from unexpected data lost and recovery expenses.

Most of us will need some kind of major/minor data recovery work sometime in our lives. A data insurance can help to deal with the cost of data recovery service without compromising on Quality and save yourself from re-doing or re-creating the data again.

The increase on digital data life has also increased the need for data recovery service in order to keep data in good condition. As data grows we may find ourselves in a greater risk to lost and manage cost even if we take daily data backup.

Know your needs - What Data insurance you need?

It is very difficult to say which data insurance plan is the best.

Not everybody has the same kind of problems or needs the data insurance. If you have one or two machine you have to consider their needs too. If you already have large corporate or AMC service provider issues your needs are different.

Just Answer following:
 1. Do you take Regular Backup?
 2. Is your Data Valuable?
 3. Is your Service provider/ Manufactures provides data recovery service?

Disclaimer : Data Recovery will be done on a BEST EFFORT Basis, 100% Data recovery is NOT guaranteed.

In the case of Normal Insurance, if life or goods are lost, money is paid. In the case of Data Insurance, if data is lost, only the data is returned (if it is recovered), and not money.

Only Janitor Data Provides the Data Insurance—Data Recovery Services AT Affordable price.

For Laptop / Desktop Hard disk

Where your stored digital data on computers, laptop or desktop can be retrieved in case of loss or accidental damage, virus infection or data access problem.
